15 *P. Pyrenaica*, Lapeyr. fide Parlatore, *P. Brutia* Ten. and with other synonyms, not to be confounded with that other *P. Pyrenaica* which is a form of *P. Laricio*. This species is so closely allied to the last that it is often considered a variety of it. But the leaves are stouter, the more numerous ducts are surrounded by strengthening cells, which is very scarce in the leaves of the other; in both these cells are found near the vessels; the male flowers are twice as large, but the outer pair of involucral bracts is almost equal to the inner ones; the cones are (thicker nearly sessile and), generally several together, and often lateral and terminal on the same tree (see pag —); the clustered cones in Tenore's typical specimen in the botanic Garden of Naples are the result of disease.

16. *P. leiophylla*, Schiede & Deppe has often 6 and even 7 leaves; the ducts are very small and often ~~at~~ wanting; the strengthening cells usually well developed in bundles under the epidermis, are, as

Phoradendron juniperinum in fl. in July, E. L. Greene

Liquid to prepare Picea etc & keep from dropping the leaves: 1. Glycerin 2. Water and some Carbolic Acid. 1-2 hours immersion is sufficient; if longer immersed the leaves hold faster but change colour. Prof E. Purkinje
